

LiveData OR Dashboard Goes "Live" at Massachusetts General Hospital

Integrated Operating Room Will Enhance Patient Safety

CAMBRIDGE, Mass., Jan. 26, 2006 – LiveData, Inc. today announced that Massachusetts General Hospital has made its initial deployment of the LiveData OR Dashboard, potentially advancing the state of the art in patient safety and OR efficiency. Visible from anywhere in this first OR and consulted throughout the surgical process, the LiveData OR Dashboard enables surgeons, nurses, anesthesiologists and other OR professionals to perform their tasks with the confidence that comes with complete, accurate, and timely information that is available to all.

LiveData OR Dashboard captures key information about the patient and operation that the entire OR team needs to see, and presents it on a 42 inch (or larger) display. The system works across diverse vendors' systems, medical devices and patient monitors, gathering and synthesizing data in real-time, and enabling staff to take-in the state of the patient and operation at a glance. The system also archives information for subsequent retrieval and analysis.

"The OR is one of the most complex, time-sensitive, intense and expensive care environments in a hospital," said Marc Holland, Program Director of Health Provider Research at Health Industry Insights, a unit of International Data Corp., Framingham, Massachusetts. "A product such as the LiveData OR Dashboard offers clinicians and hospitals the opportunity to significantly improve patient safety, patient throughput, staff communications and productivity by automating the acquisition, monitoring and integration of critical OR clinical and event information."

About Live Data

LiveData, Inc. is the leading innovator of smart integration technology. LiveData solutions continuously monitor, synthesize and respond to highly complex, multi-faceted processes in real time, spanning a broad mix of distributed devices, diverse vendors' systems, protocols and databases. Founded in 1991, LiveData serves customers in healthcare, electric power and utilities, and manufacturing industries, as well as state and local governments.
