

LiveData OR-Dashboard with Active Time Out™

The automated solution for managing checklists – ensuring patient safety while increasing OR efficiency

Supporting effective communication, regulatory compliance, and efficiency in the operating room, OR-Dashboard is the original automated workflow solution dedicated to helping the surgical team remain both fully focused on the patient and mindful of critical protocols and efficiency objectives.

A unique combination of real-time integration technology and human factors engineering, OR-Dashboard automatically presents the entire OR

team with a comprehensive, continuously updated view of the surgical case from setup to closing; as well as interactive checklists, workflow alerts, and other real-time tools for carrying out Joint Commission and CMS mandates.

Transforming the operating room into a patient-safe zone, OR-Dashboard equips staff to work effectively as a team and make safety compliance a part of routine practice.

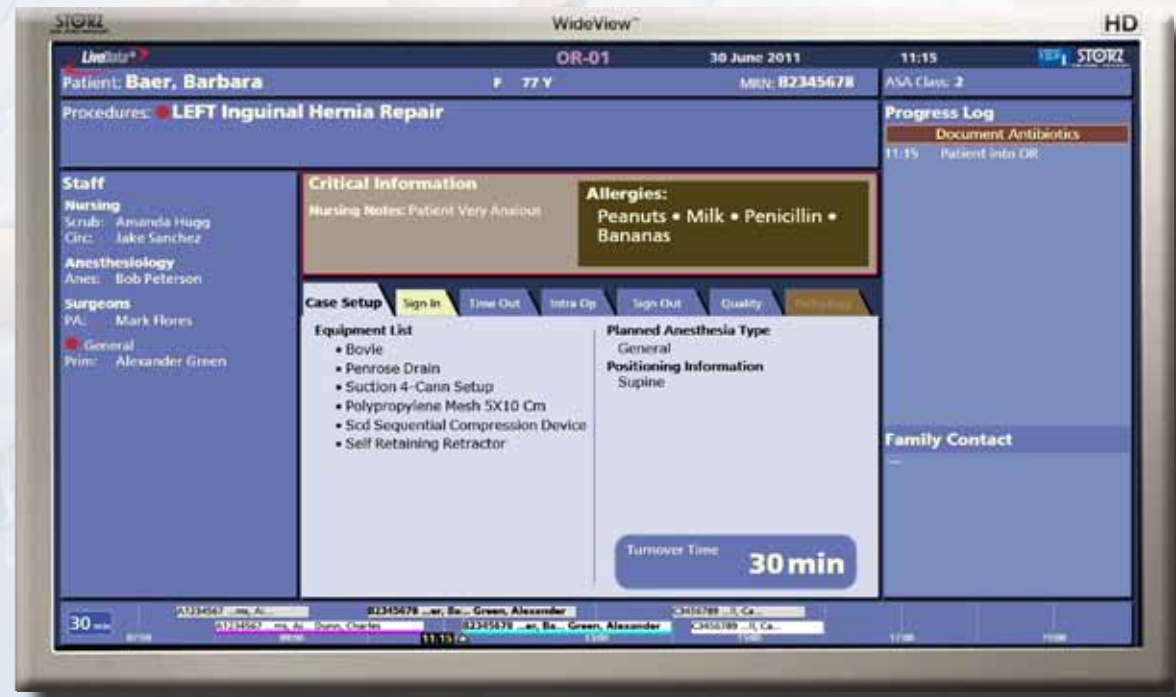

Reduce the risk of surgical infections and adverse events

- Perform fully effective Time Outs (see back)
- Conduct safer hand-offs
- Obtain full situational awareness
- Easily recognize the risk of high blood loss
- Easily identify and track all surgical specimens
- Prevent retention of foreign objects in surgical wounds
- Remain warned of patient allergies or potential adverse drug reactions

Monitor and measure compliance with safety protocols

- Obtain CMS, Joint Commission compliance results via automated reports
- Monitor the Surgical Safety Checklist with clinical performance metrics
- Monitor and act on safety protocols from outside the OR in real time

Monitor, measure, and comply

Active Time Out is a failsafe method for ensuring full compliance with surgical safety checklist procedures aimed at eliminating wrong patient/wrong procedure/wrong site surgeries and other adverse events. With Active Time Out, hospitals are assured that Time Outs are performed as intended—consistently and with the focused attention of the entire OR team. LiveData implements checklists that are specific to hospital protocol, e.g. checklists based on the World Health Organization Surgical Safety Checklist (shown above), the Joint Commission, or other specific guidelines.
