

A woman with dark curly hair, wearing blue scrubs, is smiling and looking towards the camera. In the background, a computer monitor displays a surgical schedule with various colored blocks representing different cases and times.

LiveData PeriOp Planner™

Make it easier to say “yes” to surgeons requesting more OR time. PeriOp Planner provides clinic schedulers with curated access to your surgical schedule allowing surgeons to perform more cases at your hospital. As case volume grows, revenue and margin rise.

EHR tools force clinic and hospital schedulers to engage in inefficient and redundant communications when trying to identify and claim unused OR time. PeriOp Planner solves these communication issues by giving the clinic and hospital schedulers the ability to request surgery slots in real-time without multiple phone calls, faxes, and endless keystrokes in the EHR. The hospital scheduler has the final approval to confirm the appointment.

"My business development team uses LiveData PeriOp Planner as a tool in their back pocket. When they talk to surgeons about bringing more cases to our hospital, they show them in real-time the opportunities they have to schedule with us. In addition to being a more efficient way to schedule cases, it's a valuable marketing tool."

Hospital CEO
United States

PeriOp Planner includes two applications:

- 1 **Case Planner** enables clinical staff to plan surgical cases from their office with approval from the hospital scheduling team
 - ◆ PreOp Workup ensures that patients are ready for surgery, avoiding cancellations and rescheduling
- 2 **Block Planner** allows you to fully control your block schedule with two views:
 - ◆ Primary Block that displays the facility's primary schedule
 - ◆ Weekly Block that allows staff to override the primary schedule to accommodate vacations, room closures, maintenance, etc.

For hospitals, PeriOp Planner provides advantages both to the hospital and schedulers:

- 1 Surgeons that claim unused OR time are less likely to take their cases to other hospitals, resulting in greater revenue and increased margins
- 2 Schedulers won't spend time on the phone negotiating with their clinic counterparts
