

LiveData PeriOp Manager™

Finding more surgical opportunities within a post-pandemic schedule brimming with new cases—and constrained by a nationwide perioperative staff shortage—has highlighted the need for hospitals to transform their perioperative environment.

LiveData PeriOp Manager accelerates that transformation by streamlining processes, increasing block utilization, reducing cancellations, mitigating the impact of staff shortages, improving inter-departmental communications, and enhancing patient safety.

LIVEDATA PERIOP MANAGER INCLUDES:

LiveData PeriOp Planner™

Built for clinic schedulers, LiveData PeriOp Planner improves scheduling workflows by visually coordinating the patient's steps from initial referral through preparation to scheduling. For short-staffed perioperative teams, modernizing scheduling workflows helps avoid downtime, callbacks, furloughs, and overtime, leading to a better work-life balance for a stretched-thin perioperative workforce.

LiveData Patient Flow™ and LiveData Family Waiting Board™

Patient Flow adds real-time patient status updates to your workflows so pre-op and surgical teams can follow patients as they move through your pre-op processes. Family Waiting Board closes the information gap between the perioperative team and waiting family members through a HIPAA-compliant wall-mounted monitor in the waiting area.

LiveData PreOp Board™

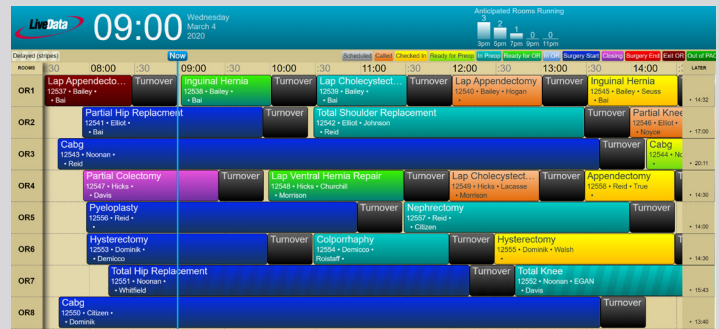

PreOp Board is a dynamic checklist combined with a single, real-time operational view of patient status and preoperative case workflow. For each case, PreOp Board displays patient, procedure, and staff names; OR room readiness; and patient preoperative requirements.

LiveData OR-Dashboard™ with Active Time Out®

OR-Dashboard with Active Time Out automates the surgical safety checklist and seamlessly integrates patient EHR data and physiological monitoring devices in the OR with automated surgical workflow and patient safety processes. Capture milestones and timing data with a single click of a handheld device to increase accuracy and eliminate double documentation for perioperative staff.

LiveData OR-Schedule Board™

OR-Schedule Board replaces whiteboards. Throughout the perioperative environment, wall-mounted displays provide a dynamic, real-time view of the day's surgical caseload. OR-Schedule Board notifies charge nurses and perioperative staff of schedule changes without phone calls or visits to the surgical suite. The solution automatically adjusts case start and end times based on real-time case workflow monitoring. It also offers an easy way for Schedulers to confirm that cases are included in the OR schedule.

LiveData PeriOp Manager Analytics™

PeriOp Manager Analytics transforms real-time operational data from your EHR into actionable quality, compliance, and efficiency insights. Eliminate the need to export, format, and import data from multiple sources.

From preoperative assessments to discharge, PeriOp Manager provides operational status updates and notifications for each care step. To learn more, please visit livedata.com or email info@livedata.com.
